DETAILED ACTION

Response to Arguments

Applicant's arguments, see pages 10-14, filed 14 October 2008, with respect to the rejections of claims 1-49 under 35 U.S.C. § 103(a) have been fully considered and are persuasive. The rejections of claims 1-49 under 35 U.S.C. § 103(a) have been withdrawn.

Allowable Subject Matter

Claims 1-49 are allowed.

The following is an examiner's statement of reasons for allowance:

Independent claim 1 recites a system for printing time-based media. The system comprises, among other things, an interface for transferring time-based media between the external media processing system and the printer comprising a first media interface for communicating with a first peripheral device external to the printer and a second media interface for communicating with a second peripheral device external to the printer, and a resource allocation module which determines the processing allocation for at least one media processing task among the printer and the external media processing system. The system of claim 1 advantageously breaks up the time-based media data processing among the printer and an external media processing system in an efficiently allocated manner and communicates with two separate external peripheral devices. This allows for efficient processing of the time-based media data, coupled with efficient communication and output of the resultant processed time-based media data.

The combination of processing time-based media, parallel processing by allocating resources among the printed and an external media processing system, and two separate communication interfaces for communicating with two separate peripheral devices external to the printer forms a system not found

Art Unit: 2625

in the prior art, either in a single reference or in an obvious combination of references. The closest prior art discovered is the previously cited combination of Sugiyama (US-5,633,723) and Ishikawa (US-5,987,226), which teaches many of the aspects of claim 1. However, the combination fails to teach the first media interface and second media interface, which are used to communicate with two separate peripheral devices. Examiner has discovered no additional prior art which anticipated claim 1 and/or renders claim 1 obvious to one of ordinary skill in the art at the time of the invention. Accordingly, claim 1 is deemed allowable over the prior art.

Claims 2-49 depend from claim 1, either directly or indirectly, and are therefore deemed allowable at least due to their respective dependencies.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
